Pavan Metkari

Java Developer | Spring Boot | Microservices | REST APIs | JWT/OAuth | MySQL/PostgreSQL | Docker

Mumbai | pavan.metkari0210@gmail.com | +91 9767480879 | linkedin.com/in/pavanmetkari | github.com/pavan02m

Summary

Java Developer with 2+ years of experience building scalable, event-driven microservices using Java, Spring Boot, and Kafka. Proven ability to design high-performance APIs, optimize backend systems, and contribute to distributed architecture decisions in production environments.

Technical Skills

Languages: Java, C++, JavaScript

Backend & Frameworks: Spring Boot, Spring MVC, REST APIs, Kafka, Microservices, JWT, OAuth

Database: MySQL, PostgreSQL, MongoDB

DevOps & tools: Docker, Jenkins, Git, Postman, AWS S3, AWS lambda, AWS EC2

Core Concepts: OOP, Design Patterns, System Design Basics, Scalability, Reliability, Secure Coding

Experience

Software Engineer, TCS – Mumbai Oct 2024 – Present

- Developed and maintained enterprise backend systems using **Java, Spring Boot, Kafka, and Microservices,** following event-driven and distributed system architecture principles.
- Designed and deployed 15+ REST APIs handling 3500+ requests/day, improving service response time by 30% and ensuring secure authentication via JWT/OAuth
- Worked with **relational and NoSQL databases,** supporting backend integrations, deployment workflows, and production support activities.

Software Developer - Intern, Topwell Digitals – Remote Dec 2023 – Aug 2024

- Built backend services using **Node.js, Express.js, and MongoDB,** focusing on API development and system integration.
- Refactored legacy backend modules into modular services, reducing code complexity by 45% and improving maintainability
- Integrated frontend applications with backend APIs to support dynamic content and user interactions.
- Worked on improving application performance, usability, and responsiveness.

Projects

AI-Powered Code Review github.com/ai-code-reviewer

- Built an AI-driven GitHub code review platform using **LLMs and RAG** to deliver **context-aware, structured pull request reviews,** including inline comments, severity tagging, summaries, and architectural insights.
- Implemented repository-wide semantic indexing with **vector databases and embeddings, enabling deep codebase** understanding, intelligent context retrieval, and consistent review quality across pull requests.
- Developed a scalable full-stack system with **secure authentication, subscription-based usage controls,** analytics dashboards, and seamless GitHub App and **webhook** integrations.
- Tools Used: React, Next.js, TypeScript, Node.js, Fastify/Express, LLMs, RAG, Vector Databases (Pinecone), PostgreSQL, Prisma, GitHub APIs, OAuth, Async Job Processing

Timetable Management System github.com/orgs/tmsvit

- Designed scheduling engine using Genetic Algorithms, decreasing conflicts.
- Integrated chatbot and role-based UI, reducing student query response time.
- Tools Used: Next.js, MongoDB, Node.js, Express.js, Python, Flask, Django, Postman, Chatbot

Education

Vidyalankar Institute of Technology , B.E in Information Technology Jan 2021 – May 2024

- CGPA: 9.62/10.0

Achievements

Smart India Hackathon Finalist (2022): Top 5 out of 200+ teams in SIH 2022

IEEE Overflow Coding Competition (3rd Rank): Placed 3rd among 150+ participants in data structure challenges.

Techgyanathon & Tantravihar Winner: Secured 1st place in inter-college web development competitions.
